Coronavirus infection is acquired by 2 principle routes - whilst Coronavirus symptoms are often mild, it can cause acute illness & in some individuals death. Infection is acquired by 2 principle routes:

- A. Airborne droplets carrying the virus which have been exhaled by an infected person. The risk is greatest when a person is displaying symptoms, but not all infected persons have symptoms. Coughs & sneezes increase infection risk. The virus can enter another person via mouth, nostrils or eyes.
- B. Contamination of hands from touching a surface contaminated with virus particles (because an infected person has coughed or sneezed over it, or passed on the germs with their hands) & then touching your own face (mouth, nostrils, eyes) with your contaminated hand.
